

## Individual reflection – Week2

### **What do I want to learn or understand better?**

The past two weeks I have learned more about scrum and agile development, from attending lectures and team exercises. There is still a lot more that I want to learn about these topics. I plan to do this by reading about scrum and agile development, and by trying to put the principles and methods learned into practice (learning by doing). I also want to continue to learn more about the business side of software development.

### **How can I help someone else, or the entire team, to learn something new?**

I could share knowledge gained from previous project courses, to team members not as familiar with these topics. For example, designing a GUI or planning a project by making a domain/design model.

### **What is my contribution towards the team's application of scrum?**

I have attended the lectures during these first two weeks, as well as the team exercises, which has given me theoretical and practical experience in the basics of scrum and agile development. I have also attended and participated in all team meetings where we have discussed how we are going to implement scrum practices into our project.

### **What is my contribution towards the team's deliveries?**

In addition to taking part in the team meetings, I have helped making the GUI mockup and added User Stories to the Trello board.
