

Individual reflection DAT256

Adam Andersson

Week 3

What do I want to learn or understand better?

For this week I'd like to learn about the next steps for our sprint, how we will derive tasks from the user stories and then how we will determine the time needed to complete them as well as how we will decide our teams velocity.

How can I help someone, or entire team, to learn something new?

For this week when we are getting closer and closer to the actual coding I've been helping to explain how git and workflows are used and how they are adapted on a project. Since I partook in creation in the domain and design model I've also shared my thoughts around it since I've got previous experience about from a earlier course that put a lot of emphasis on these two aspects in particular.

What is my contribution towards the team's use of scrum?

I've participated in our weekly meetings joining in in our discussions and during these I've taken part in changing our social contract to better suit our upcoming technical needs. I've also been active on Trello, mostly breaking down user stories that were too big to be considered individual user stories.

What is my contributions the team's deliveries?

This week I've broken down some of our bigger user stories into smaller user stories since it became apparent from the Monday feedback that they were more like epics in their earlier state. I've also created a domain model and helped in creating the design model.
