

Individual reflection – Week1

What do I want to learn or understand better?

I want to learn how to better organize a software development project, by applying principles from agile development and scrum. I also want to learn how to plan a software project from a business model perspective.

How can I help someone else, or the entire team, to learn something new?

One way is to share knowledge about things that I know about, but others have not yet learned. For example, setting up version control or an android project.

What is my contribution towards the team's application of scrum?

By attending the lectures, and in particular the team exercises (Kata exercise and the Lego exercise), I have gained some experience in how scrum can be used in development. Together with the team, during the exercises, I have practiced iterative development, user story management and working in sprints.

What is my contribution towards the team's deliveries?

At the moment, my contribution is attending and participating in the group meetings and discussions to get the project started.
