

Individual reflection DAT256

Adam Andersson

Week 8

What do I want to learn or understand better?

A:

My goal from last week was to learn more about android related elements but by the nature of my tasks I haven't been introduced to any of these. If anything I have learnt more about the constraint layout and what makes it differ from the relative layout.

B:

Since this is the last sprint I don't feel like there is much room for learning something new since our priorities are to finish up the application and make it presentable, so if I have to say something I'd like to learn how wrapping up a project will be done and this I will "learn by doing"

A→B:

Work in close proximity with the rest of the group so that we aren't working in the same areas on some of the more general tasks (like code clean-up, refactoring etc.).

How can I help someone, or entire team, to learn something new?

A:

Same as earlier sprint weeks.

B:

Go on as I have done these pasts sprints.

A→B:

By continuing to be active and contactable.

What is my contribution towards the team's use of scrum?

A:

This goes along the same lines as earlier weeks. Being active during the meetings in discussions regarding customer value, velocity, sprint planning etc. following our git routine and social contract.

B:

Continue to adhere to our social contract, continue to follow our git routine, and if I feel like something needs changing I will speak my mind.

A→B:

Go on in the same fashion as the previous weeks.

What is my contributions the team's deliveries?

A:

This week I've completed tasks comprises giving the driver of a trip the ability to see all passengers in a list located on the drivers trip view. I've also added price calculations for a trip that uses the distance between start and end point to calculate a price for the trip, I've also removed the static price for a trip and replaced it with the calculated price I spoke about earlier.

B:

Try and finish up as much as possible of what has already been started, remove bugs, unused code etc.

A→B:

Since this is our last sprint we want to clear up the app as much as possible to make it ready for presentation, having close connections to the others in the team will be crucial in making code refactoring and the removal of bugs easier.
