

Individual Reflection

Week 3

DAT256

Anders Magnusson

What do I want to learn or understand better?

I want to learn how to estimate our velocity and the size of user stories sufficiently. I also want to get better at implementing database functionality which I have a tiny bit of experience with from a previous project.

How can I help someone else, or the entire team, to learn something new?

I can help the team with how to use the MVC (or similar) pattern correctly as I have used that kind of design pattern many times before and have previously done a lot of research about them. I can also continue making sure that everyone sufficiently understands the git workflow.

What is my contribution towards the team's use of Scrum?

I have redesigned the backlog (on Trello) with some new columns to make it easier to work with Scrum. I have added tasks on the backlog, some for specific team members to do and some that anyone can assign themselves to, so that everyone can get a better idea of what they can do. I also made some changes in our social contract clarifying a few things and adding git workflow rules with easy steps for everyone to follow.

What is my contribution towards the team's deliveries?

I have added and updated a good amount of user stories for upcoming sprints. I have made a couple of versions of a domain model for the team to discuss and decide between. And I have also worked on the design model which now needs a final domain model before it can be updated further.
