

Individual reflection DAT256

Max Fransson

Week 1

What do I want to learn or understand better?

I want to get a better understanding of how to utilize Scrum, and research whether there are best practices that could benefit the development of our Software Engineering project.

How can I help someone else, or the entire team, to learn something new?

I can first of all make sure that everyone feels comfortable asking questions, so that we can try to establish a working environment where we have a high degree of communication. Other than that, I can try to coach members who are not familiar with tools such as git and Android Studio, so that they feel more comfortable using them.

What is my contribution towards the team's application of scrum?

So far, my contribution has been made through actively attending group meetings and course exercises. The exercises have furthered my knowledge on the basics of Scrum, which will allow me, and the group to work better using the Scrum framework.

What is my contribution towards the team's deliveries?

I have initialized a repository on github, which is currently used to hand in reports. I have also provided input during the group meetings, including which development tools that are viable to use.
