

Individual Reflection

Week 9

DAT256

Anders Magnusson

What do I want to learn or understand better?

A: In the last sprint I learned more about evaluating the acceptance of user stories and acting as the product owner. I also learned how to record the screen in the app on Android Studio to create video demonstrations.

B: In the future I would like to learn more about writing effective tests for the app.

A->B: I will read more about testing and try to find good examples to learn from.

How can I help someone else, or the entire team, to learn something new?

A: This week didn't focus as much on developing many new features so there weren't really many issues that came up.

B: In the future I can put more time into reviewing other people's code and provide instant feedback.

A->B: I can write comments on pull requests and also discuss about issues face to face in the meetings.

What is my contribution towards the team's use of Scrum?

A: In the last sprint I focused on adding acceptance criteria for multiple user stories. I also walked through the ones that were in review to see if they should be accepted or not so that we could be sure about what was finished and what potentially needed more work.

B: In the future I want to try the Scrum master role more.

A->B: I would assume the role in the beginning of a project.

What is my contribution towards the team's deliveries?

A: In the last sprint I added functionality for the driver to delete their own trip if they change their mind and made it so that notifications are sent out to all passengers who were on the trip to tell them that it got removed. I also made the "search trip"-function only search among trips that haven't been started or finished yet leaving those ones for a "trips history" view in the future. For the presentation I discussed the arrangement with the team and helped record video demonstration of the app.

B: In the future I want to solve more small and simple tasks that provide more progress directly towards value.

A->B: I would take on more tasks for myself early in the sprints, with the help of Trello for example, so that I don't have to worry about others planning on doing the same tasks.
