

Individual reflection DAT256

Max Fransson

Week 3

What do I want to learn or understand better?

How to efficiently and correctly break down user stories into tasks (which we will attempt to do during the next sprint).

How can I help someone else, or the entire team, to learn something new?

I am currently helping members of the team unfamiliar with Android Studio and git in preparation for the next sprint, where the tasks will involve more actual coding.

What is my contribution towards the team's application of scrum?

Attended all meetings and participated actively in the discussion, mainly concerning our deliverables for this week and the upcoming sprint.

What is my contribution towards the team's deliveries?

I pushed an android studio project to our repository, where I created an application with a bottom navigation bar, to be able to get feedback from our supervisors and to make it easier for everyone to start committing code to the repository.

I set up Lombok on one device and will help remaining team members set it up during the next sprint. I also contributed during the creation of our prototype design model.
