Individual reflection DAT256
Adam Andersson
Week 7

What do I want to learn or understand better?

A:
This week I worked on a part of the project that required a greater understanding of firebase than I had from the beginning, but after Anders walked me trough some different scenarios on how firebase was used in our app that was relevant to my task I was able to complete it as well as learn a lot for upcoming tasks that requires similar knowledge.

B:
For next week I´d like to keep getting better at using some of the elements in android programming that we are using in the project but that I don't have a very good understanding of, for example this week I was introduced to the navigation graph which seems to be a much better way of moving in-between fragments than using the methods I'm used to.

A→B:
In order to achieve this I will read up on the documentation (if there is any) for the element or function that I don't understand and after that try and find a practical example where it is implemented online.

How can I help someone, or entire team, to learn something new?

A:
My answer to this remains the same as last week, I try to be active and supportive if anyone either needs help, someone to brainstorm with or if someone wants me to review their code.

B:
Go on as I have done these pasts two weeks.

A→B:
By continuing to be active and contactable.

What is my contribution towards the team's use of scrum?

A:
Like last week I´ve used the trello board in accordance with how our group wants it to be used. I have been getting better at using git branches and pull requests more efficiently resulting in fewer errors in the necessary steps for these.

B:
Continue to adhere to our social contract, continue to follow our git routine, and if I feel like something needs changing I will speak my mind.

A→B:
Go on in the same fashion as the previous weeks.

What is my contributions the team's deliveries?

A:
For this week my contribution has consisted of doing tasks from trello and being active during our weekly meetings. The tasks I´ve focused on trello this week consists of making the start button for any given trip available to the driver when the start time of the trip has passed, I´ve also added a way to add a bankcard to a user as well as a fictive payment system that checks if the user has a added card when booking a trip. At the end of the week I also added a different detail view for the driver of a trip while the passengers view remains the same.

B:
Work on the tasks that we deem creates the most customer value and go on meetings

A→B:
Continue as I´ve been doing. Spreading out the work so that I program a little everyday to make the workload easier to handle.
